Quantum Phase Estimation

5

PHYC90045 Introduction to Quantum Computing

THE UNIVERSITY OF
MELBOURNE

The Problem

Consider an eigenvector $|\psi\rangle$ of a unitary matrix (an operation which you could implement on a quantum computer) U :

$$U |\psi\rangle = \underline{\exp(2\pi i\theta)} |\psi\rangle$$

Eigenvalue

Eigenvector

The Quantum Phase Estimation algorithm estimates the angle θ . Notice that since U is unitary, all eigenvalues of U will be of this form.

6

PHY90045 Introduction to Quantum Computing

 THE UNIVERSITY OF
 MELBOURNE

The T gate

For example, consider the T gate:

$$T = \begin{bmatrix} 1 & 0 \\ 0 & \exp(i\frac{\pi}{4}) \end{bmatrix}$$

An eigenvector of the T gate is

$$T |1\rangle = \exp\left(i\frac{\pi}{4}\right) |1\rangle$$

Eigenvalue Eigenvector

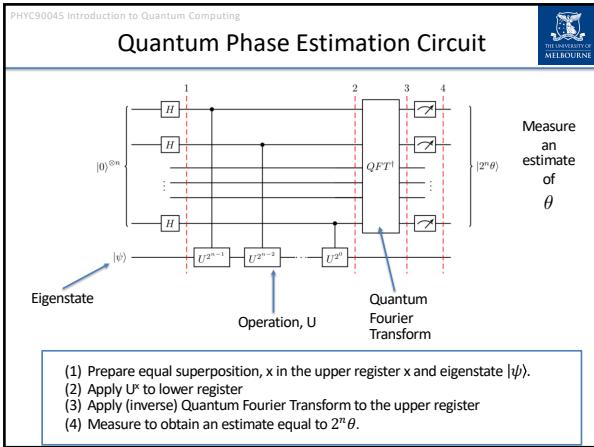

$U |\psi\rangle = \exp(2\pi i\theta) |\psi\rangle$

So in this case, we want to find:

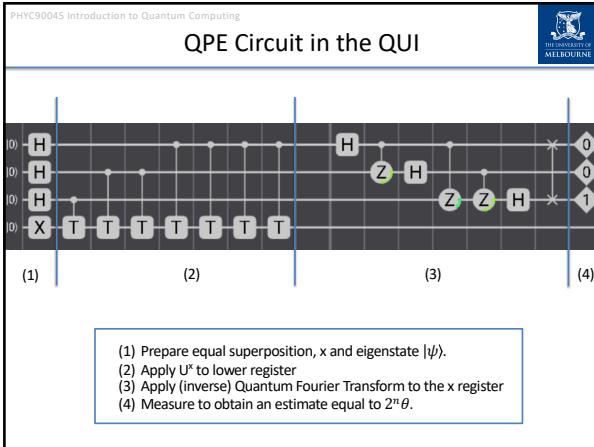

$$\theta = \frac{1}{8}$$

Quantum Phase Estimation gives a way to do this on a quantum computer.

7

8

9

Step 1: Equal Superposition

10

HYC90045 Introduction to Quantum Computing

Step 2: Applying U^x

After step 2:

$$|\psi\rangle = \frac{1}{\sqrt{2^n}} \sum_{x=0}^{2^n-1} |x\rangle T^x |1\rangle$$

$$= \frac{1}{\sqrt{2^n}} \sum_{x=0}^{2^n-1} |x\rangle \exp\left(i\frac{\pi}{4}x\right) |1\rangle$$

11

HYC90045 Introduction to Quantum Computing

Step 2: Applying U^x

(1) T T^2 T^4 (3) (4)

$$|\psi\rangle = \frac{1}{\sqrt{2^n}} \sum_{x=0}^{2^n-1} \exp\left(i\frac{\pi}{4}x\right) |x\rangle |1\rangle$$

Equal superposition, where each state has a phase proportional to x :

Measurement Probability	State
0.125	00000>
0.125	00001>
0.125	00100>
0.125	00101>
0.125	01000>
0.125	01001>
0.125	01100>
0.125	01101>
0.125	10000>
0.125	10001>
0.125	10100>
0.125	10101>
0.125	11000>
0.125	11001>
0.125	11100>
0.125	11101>

12

PHYS90045 Introduction to Quantum Computing

Step 3: Quantum Fourier Transform

The QFT determines the period of the function, in this case it will exactly find the answer:

$$|\psi\rangle = |001\rangle |1\rangle$$

13

PHYS90045 Introduction to Quantum Computing

Step 4: Measure

Finally we measure and obtain the result $001_2 = 1$, so in this case:

$$U |\psi\rangle = \exp(2\pi i\theta) |\psi\rangle$$

$$2^n \theta = 1$$

$$\theta = \frac{1}{8}$$

As we expected!

$$T |1\rangle = \exp\left(i\frac{\pi}{4}\right) |1\rangle$$

14

PHYS90045 Introduction to Quantum Computing

Quantum Phase Estimation Circuit

Eigenstate $|\psi\rangle$

Operation, U

Quantum Fourier Transform

$U |\psi\rangle = \exp(2\pi i\theta) |\psi\rangle$

(1) Prepare equal superposition, x and eigenstate $|\psi\rangle$.
 (2) Apply U^t to lower register
 (3) Apply (inverse) Quantum Fourier Transform to the x register
 (4) Measure to obtain an estimate equal to $2^n \theta$.

Measure an estimate of θ

15

PHYC90045 Introduction to Quantum Computing

Quantum Fourier Transform

16

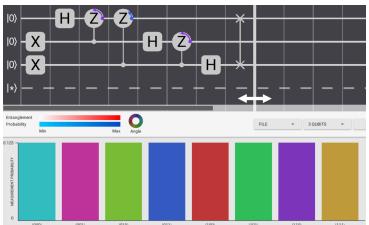

PHYC90045 Introduction to Quantum Computing

Fourier Transform in Quantum Computing

In QC the equivalent of the Fourier Transform – quantum Fourier Transform (QFT) – is important in a number of algorithms, most notably Shor's Factoring algorithm...

Hence, before we can cover Shor's algorithm we need to understand the QFT and how to implement it in a QC (and on the QUI)...

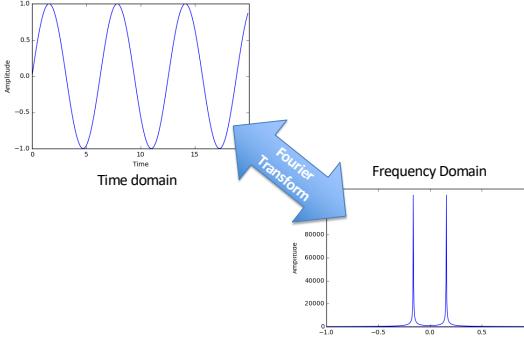

17

PHYC90045 Introduction to Quantum Computing

Introduction to Fourier Transform

18

According to:

$$y_k = \frac{1}{\sqrt{N}} \sum_{j=0}^{N-1} x_j e^{2\pi i j k / N}$$

NB.
 $i = \text{sqrt}(-1)$
 j and k are integers

e.g. Frequency Domain

e.g. Time Domain

19

PHYS90045 Introduction to Quantum Computing

 THE UNIVERSITY OF
 MELBOURNE

Example: Fourier transform of periodic function

Imagine that we had a periodic function:

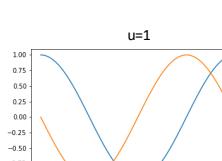

$$x_j = \exp\left(-2\pi i \frac{u_j}{N}\right)$$

Complex number, $i^2=-1$

0 ≤ j < N

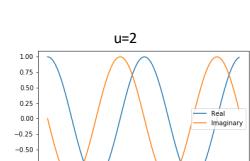

The frequency, u

$u=1$

j	Real	Imaginary
0	1.00	0.00
20	-0.80	-0.60
40	-1.00	-0.80
60	-0.80	-0.60
80	0.00	0.00
100	1.00	0.00

$u=2$

j	Real	Imaginary
0	1.00	0.00
20	-0.90	-0.70
40	-1.00	-0.90
60	-0.90	-0.70
80	0.00	0.00
100	1.00	0.00

20

PHYC90045 Introduction to Quantum Computing

 THE UNIVERSITY OF
 MELBOURNE

Example: Periodic function

$$\begin{aligned}
 y_k &= \frac{1}{\sqrt{N}} \sum_{j=0}^{N-1} x_j \exp \left(2\pi i \frac{jk}{N} \right) \\
 &= \frac{1}{\sqrt{N}} \sum_{j=0}^{N-1} \exp \left(-2\pi i \frac{uj}{N} \right) \exp \left(2\pi i \frac{jk}{N} \right) \\
 &= \frac{1}{\sqrt{N}} \sum_{j=0}^{N-1} \exp \left(-2\pi i \frac{j(k-u)}{N} \right)
 \end{aligned}$$

If $k=u$ then

$y_u = \sqrt{N}$

21

PHYC90045 Introduction to Quantum Computing

 The University of
 MELBOURNE

Example: Periodic function

For any other value of k ,

$$y_k = \frac{1}{\sqrt{N}} \sum_{j=0}^{N-1} \exp \left(-2\pi i \frac{j(k-u)}{N} \right)$$

Recall, for a geometric series,

$$1 + r + r^2 + \dots + r^{N-1} = \frac{1 - r^N}{1 - r}$$

Where for us,

$$r = \exp \left(-2\pi i \frac{k-u}{N} \right)$$

And therefore

$$r^N = 1$$

Except for $k=u$,

$y_k = 0$

22

PHYC90045 Introduction to Quantum Computing

 THE UNIVERSITY OF
 MELBOURNE

Fourier Transform as a Matrix

We define the Fourier transformation matrix as follows:

$$y_k = \frac{1}{\sqrt{N}} \sum_{j=0}^{N-1} x_j e^{2\pi i j k / N}$$

$$y_k = \sum_j F_{kj} x_j \quad \text{where} \quad F_{kj} = \frac{1}{\sqrt{N}} e^{2\pi i j k / N}$$

For example:

$$\begin{aligned} \text{N=2: } F &= \frac{1}{\sqrt{2}} \begin{bmatrix} 1 & 1 \\ 1 & -1 \end{bmatrix} & \text{N=4: } F &= \frac{1}{2} \begin{bmatrix} 1 & 1 & 1 & 1 \\ 1 & i & -1 & -i \\ 1 & -1 & 1 & -1 \\ 1 & -i & -1 & i \end{bmatrix} \end{aligned}$$

 We will see that the quantum Fourier transform for one qubit is a Hadamard gate!

23

PHYC90045 Introduction to Quantum Computing

Quantum Fourier Transform (QFT)

The Fourier transform, written in this matrix form is unitary. It can make a valid quantum operation:

$$|\psi\rangle = \sum_{j=0}^{N-1} x_j |j\rangle \xrightarrow{\text{QFT}} |\psi'\rangle = \sum_{j=0}^{N-1} y_j |j\rangle \quad \text{with} \quad y_k = \frac{1}{\sqrt{N}} e^{2\pi i j k / N}$$

On an individual basis state $|a\rangle$ (i.e. $j = a$ only non-zero x_j) we have:

$$|a\rangle \rightarrow \frac{1}{\sqrt{N}} \sum_{k=0}^{N-1} y_k |k\rangle, \quad y_k = \sum_{j=0}^{N-1} F_{kj} x_j = F_{ka} = \frac{1}{\sqrt{N}} e^{2\pi i k a / N}$$

i.e. $\text{QFT } |a\rangle = \frac{1}{\sqrt{N}} \sum_{k=0}^{N-1} e^{\frac{2\pi i}{N} k a} |k\rangle$ (more familiar form relating variables a and k by Fourier transform)

Question: How can we systematically make this operation using quantum gates?

24

PHYC90045 Introduction to Quantum Computing

Product Form of QFT

The Fourier transform can be expressed in a product notation:

$$|j_1, \dots, j_n\rangle \rightarrow \frac{|0\rangle + e^{2\pi i 0.j_n}|1\rangle}{\sqrt{2}} \otimes \frac{|0\rangle + e^{2\pi i 0.j_{n-1}j_n}|1\rangle}{\sqrt{2}} \otimes \dots \otimes \frac{|0\rangle + e^{2\pi i 0.j_1j_2\dots j_{n-1}j_n}|1\rangle}{\sqrt{2}}$$

(this is not obvious – see appendix at end)

Where the notation $0.j_1j_2\dots j_n = \frac{j_1}{2} + \frac{j_2}{2^2} + \dots + \frac{j_{n-1}}{2^{n-1}} + \frac{j_n}{2^n}$

is shorthand for writing a fraction in binary notation. That is,

$$\begin{aligned} 0.1 &= \frac{1}{2} \\ 0.11 &= \frac{1}{2} + \frac{1}{2^2} = \frac{3}{4} \\ 0.101 &= \frac{1}{2} + \frac{1}{2^3} = \frac{5}{8} \quad \text{etc} \end{aligned}$$

25

PHYC90045 Introduction to Quantum Computing

Product Form: One Qubit

$$|j_1, \dots, j_n\rangle \rightarrow \frac{|0\rangle + e^{2\pi i 0.j_n}|1\rangle}{\sqrt{2}} \otimes \frac{|0\rangle + e^{2\pi i 0.j_{n-1}j_n}|1\rangle}{\sqrt{2}} \otimes \dots \otimes \frac{|0\rangle + e^{2\pi i 0.j_1j_2\dots j_{n-1}j_n}|1\rangle}{\sqrt{2}}$$

For one qubit (ie. n=1, N=2): $|j_1\rangle \rightarrow \frac{|0\rangle + e^{2\pi i 0.j_1}|1\rangle}{\sqrt{2}}$ $j_1 = 0, 1$

$$|0\rangle \rightarrow \frac{|0\rangle + e^{2\pi i 0.0}|1\rangle}{\sqrt{2}} = \frac{|0\rangle + |1\rangle}{\sqrt{2}}$$

Beware binary fraction!
0.1 = 1/2 etc

$$|1\rangle \rightarrow \frac{|0\rangle + e^{2\pi i 0.1}|1\rangle}{\sqrt{2}} = \frac{|0\rangle + e^{\pi i}|1\rangle}{\sqrt{2}} = \frac{|0\rangle - |1\rangle}{\sqrt{2}}$$

As before, we get:
 $F = \frac{1}{\sqrt{2}} \begin{bmatrix} 1 & 1 \\ 1 & -1 \end{bmatrix}$

26

PHYC90045 Introduction to Quantum Computing

Product Form: Two Qubits

$$|j_1, \dots, j_n\rangle \rightarrow \frac{|0\rangle + e^{2\pi i 0.j_n}|1\rangle}{\sqrt{2}} \otimes \frac{|0\rangle + e^{2\pi i 0.j_{n-1}j_n}|1\rangle}{\sqrt{2}} \otimes \dots \otimes \frac{|0\rangle + e^{2\pi i 0.j_1j_2\dots j_{n-1}j_n}|1\rangle}{\sqrt{2}}$$

$$|j_1j_2\rangle \rightarrow \frac{|0\rangle + e^{2\pi i 0.j_2}|1\rangle}{\sqrt{2}} \otimes \frac{|0\rangle + e^{2\pi i 0.j_1j_2}|1\rangle}{\sqrt{2}}$$

$$|00\rangle \rightarrow \frac{|0\rangle + |1\rangle}{\sqrt{2}} \otimes \frac{|0\rangle + |1\rangle}{\sqrt{2}} = \frac{|00\rangle + |01\rangle + |10\rangle + |11\rangle}{2}$$

$$|01\rangle \rightarrow \frac{|0\rangle + e^{i2\pi 0.1}|1\rangle}{\sqrt{2}} \otimes \frac{|0\rangle + e^{i2\pi 0.01}|1\rangle}{\sqrt{2}} = \frac{|00\rangle + i|01\rangle - |10\rangle - i|11\rangle}{2}$$

$$|10\rangle \rightarrow \frac{|0\rangle + |1\rangle}{\sqrt{2}} \otimes \frac{|0\rangle + e^{i2\pi 0.1}|1\rangle}{\sqrt{2}} = \frac{|00\rangle - |01\rangle + |10\rangle - |11\rangle}{2}$$

$$|11\rangle \rightarrow \frac{|0\rangle + e^{i2\pi 0.1}|1\rangle}{\sqrt{2}} \otimes \frac{|0\rangle + e^{i2\pi 0.11}|1\rangle}{\sqrt{2}} = \frac{|00\rangle - i|01\rangle - |10\rangle + i|11\rangle}{2}$$

27

PHYC90045 Introduction to Quantum Computing

Product Notation: Two Qubits

$|j_1, \dots, j_n\rangle \rightarrow \frac{|0\rangle + e^{2\pi i 0.j_n}|1\rangle}{\sqrt{2}} \otimes \frac{|0\rangle + e^{2\pi i 0.j_{n-1}j_n}|1\rangle}{\sqrt{2}} \otimes \dots \otimes \frac{|0\rangle + e^{2\pi i 0.j_1j_2\dots j_{n-1}j_n}|1\rangle}{\sqrt{2}}$

$|00\rangle \rightarrow \frac{|0\rangle + |1\rangle}{\sqrt{2}} \otimes \frac{|0\rangle + |1\rangle}{\sqrt{2}} = \frac{|00\rangle + |01\rangle + |10\rangle + |11\rangle}{2}$

$|01\rangle \rightarrow \frac{|0\rangle + e^{i2\pi 0.1}|1\rangle}{\sqrt{2}} \otimes \frac{|0\rangle + e^{i2\pi 0.01}|1\rangle}{\sqrt{2}} = \frac{|00\rangle + i|01\rangle - |10\rangle - i|11\rangle}{2}$

$|10\rangle \rightarrow \frac{|0\rangle + |1\rangle}{\sqrt{2}} \otimes \frac{|0\rangle + e^{i2\pi 0.1}|1\rangle}{\sqrt{2}} = \frac{|00\rangle - |01\rangle + |10\rangle - |11\rangle}{2}$

$|11\rangle \rightarrow \frac{|0\rangle + e^{i2\pi 0.1}|1\rangle}{\sqrt{2}} \otimes \frac{|0\rangle + e^{i2\pi 0.11}|1\rangle}{\sqrt{2}} = \frac{|00\rangle - i|01\rangle - |10\rangle + i|11\rangle}{2}$

As before: $F = \frac{1}{2} \begin{bmatrix} 1 & 1 & 1 & 1 \\ 1 & i & -1 & -i \\ 1 & -1 & 1 & -1 \\ 1 & -i & -1 & i \end{bmatrix}$

28

PHYC90045 Introduction to Quantum Computing

Pick it apart...

Look a little bit more closely:

$|j_1, \dots, j_n\rangle \rightarrow \frac{|0\rangle + e^{2\pi i 0.j_n}|1\rangle}{\sqrt{2}} \otimes \frac{|0\rangle + e^{2\pi i 0.j_{n-1}j_n}|1\rangle}{\sqrt{2}} \otimes \dots \otimes \frac{|0\rangle + e^{2\pi i 0.j_1j_2\dots j_{n-1}j_n}|1\rangle}{\sqrt{2}}$

Very similar to equal superposition. All qubits have an equal amplitude, just not an equal phase.

Each qubit acquires a phase dependent on (the original state of) all prior qubits.

$\frac{|0\rangle + e^{2\pi i 0.j_1j_2\dots j_n}|1\rangle}{\sqrt{2}} = \frac{|0\rangle + e^{2\pi i [\frac{j_1}{2} + \frac{j_2}{2^2} + \dots + \frac{j_n}{2^n}]}|1\rangle}{\sqrt{2}}$

$= \frac{|0\rangle + e^{2\pi i \frac{j_1}{2}} e^{2\pi i \frac{j_2}{2^2}} \dots e^{2\pi i \frac{j_n}{2^n}}|1\rangle}{\sqrt{2}}$

Product of phases applied, i.e. of the form $\begin{pmatrix} 1 & 0 \\ 0 & e^{2\pi i j_k/2^k} \end{pmatrix}$ by $\theta = \frac{2\pi}{2^k}$ controlled by j_k

29

PHYC90045 Introduction to Quantum Computing

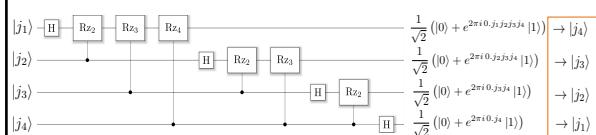

Circuit for QFT

Look carefully at the product form:

$|j_1, \dots, j_n\rangle \rightarrow \frac{|0\rangle + e^{2\pi i 0.j_n}|1\rangle}{\sqrt{2}} \otimes \frac{|0\rangle + e^{2\pi i 0.j_{n-1}j_n}|1\rangle}{\sqrt{2}} \otimes \dots \otimes \frac{|0\rangle + e^{2\pi i 0.j_1j_2\dots j_{n-1}j_n}|1\rangle}{\sqrt{2}}$

Suggests an efficient circuit implementation – e.g. for n=4:

Controlled rotations with: $R_{z_k} = \begin{pmatrix} 1 & 0 \\ 0 & e^{2\pi i j_k/2^k} \end{pmatrix}$

Notice how the required QFT form is recovered by re-labelling qubits

30

PHYC90045 Introduction to Quantum Computing

One qubit QFT circuit

Look at the pattern of the circuit:

For one qubit we have just a H-gate:

$$|j_1\rangle \rightarrow \frac{|0\rangle + e^{2\pi i 0.j_1}|1\rangle}{\sqrt{2}}$$

$$|0\rangle \rightarrow \frac{|0\rangle + e^{2\pi i 0.0}|1\rangle}{\sqrt{2}} = \frac{|0\rangle + |1\rangle}{\sqrt{2}}$$

$$|1\rangle \rightarrow \frac{|0\rangle + e^{2\pi i 0.1}|1\rangle}{\sqrt{2}} = \frac{|0\rangle + e^{\pi i}|1\rangle}{\sqrt{2}} = \frac{|0\rangle - |1\rangle}{\sqrt{2}}$$

31

PHYC90045 Introduction to Quantum Computing

Two Qubit QFT circuit

QUI gates:

$$R_{z_k} = \begin{pmatrix} 1 & 0 \\ 0 & e^{2\pi i / 2^k} \end{pmatrix} \quad R_{z_2} = \begin{pmatrix} 1 & 0 \\ 0 & e^{2\pi i / 2^2} \end{pmatrix} = \begin{pmatrix} 1 & 0 \\ 0 & e^{i\pi/2} \end{pmatrix}$$

$R_Z(\theta_R) = e^{i\theta_g} \left[I \cos \frac{\theta_R}{2} - iZ \sin \frac{\theta_R}{2} \right] = e^{i\theta_g} \left[\begin{pmatrix} \cos \frac{\theta_R}{2} & 0 \\ 0 & \cos \frac{\theta_R}{2} \end{pmatrix} - i \begin{pmatrix} \sin \frac{\theta_R}{2} & 0 \\ 0 & -\sin \frac{\theta_R}{2} \end{pmatrix} \right]$

$$= e^{i\theta_g} \begin{pmatrix} \cos \frac{\theta_R}{2} - i \sin \frac{\theta_R}{2} & 0 \\ 0 & \cos \frac{\theta_R}{2} + i \sin \frac{\theta_R}{2} \end{pmatrix}$$

$$= e^{i\theta_g} \begin{pmatrix} e^{-i\theta_R/2} & 0 \\ 0 & e^{+i\theta_R/2} \end{pmatrix}$$

$$= e^{i\theta_g} e^{-i\theta_R/2} \begin{pmatrix} 1 & 0 \\ 0 & e^{i\theta_R} \end{pmatrix}$$

$$R_{z_2} = \begin{pmatrix} 1 & 0 \\ 0 & e^{i\pi/2} \end{pmatrix} \equiv R_Z \left(\frac{\pi}{2} \right) \quad \text{with } \theta_g = \frac{\pi}{4} \quad \text{Global phase cancels prefactor}$$

32

PHYC90045 Introduction to Quantum Computing

Two Qubit QFT circuit - walkthrough

Check it gives the product form:

$$|\psi_a\rangle = \frac{1}{\sqrt{2}}(|0\rangle + e^{i\pi 0.j_1}|1\rangle) \otimes |j_2\rangle \quad \text{Hadamard has negative sign on } |1\rangle \text{ if } j_1 = 1$$

$$|\psi_b\rangle = \frac{1}{\sqrt{2}}(|0\rangle + e^{i\pi j_1} e^{i(\pi/2)j_2}|1\rangle) \otimes |j_2\rangle \quad R_{z_2} \text{ applied only when } j_2 = 1$$

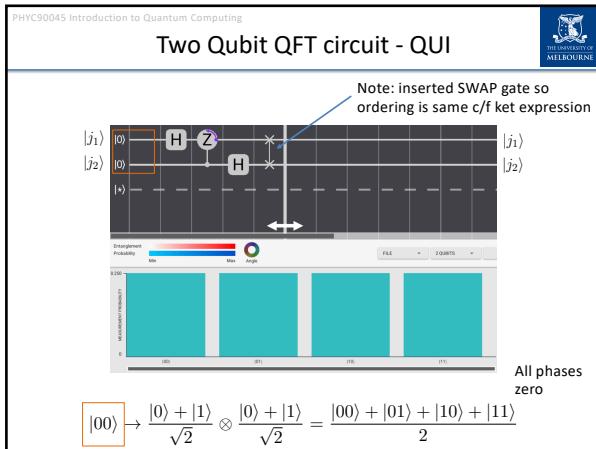

$$|\psi_c\rangle = \frac{1}{\sqrt{2}}(|0\rangle + e^{i\pi j_1} e^{i(\pi/2)j_2}|1\rangle) \otimes \frac{1}{\sqrt{2}}(|0\rangle + e^{i\pi j_2}|1\rangle) \quad \text{Hadamard on } |j_2>$$

Binary fractions: $e^{i\pi j_1} e^{i(\pi/2)j_2} = e^{2\pi i (j_1/2 + j_2/4)} = e^{2\pi i 0.j_1 j_2}$

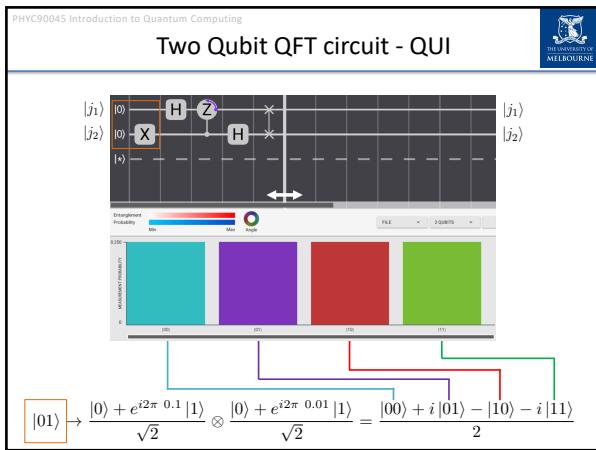

$$|\psi_c\rangle = \frac{1}{\sqrt{2}}(|0\rangle + e^{2\pi i 0.j_1 j_2}|1\rangle) \otimes \frac{1}{\sqrt{2}}(|0\rangle + e^{2\pi i 0.j_2}|1\rangle)$$

i.e. circuit gives product form with j1 and j2 order reversed

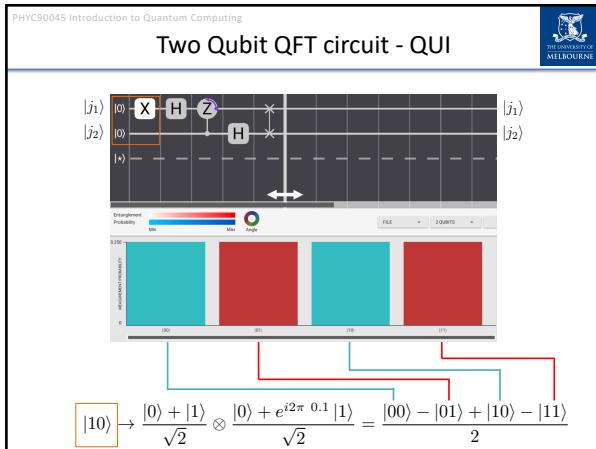

33

34

35

36

PHYS90045 Introduction to Quantum Computing

Two Qubit QFT circuit - QUI

$$|11\rangle \rightarrow \frac{|0\rangle + e^{i2\pi/4}|1\rangle}{\sqrt{2}} \otimes \frac{|0\rangle + e^{i2\pi/4}|1\rangle}{\sqrt{2}} = \frac{|00\rangle - i|01\rangle - |10\rangle + i|11\rangle}{2}$$

37

PHYS90045 Introduction to Quantum Computing

Three Qubit QFT circuit

$$R_{z_2} = \begin{pmatrix} 1 & 0 \\ 0 & e^{i\pi/2} \end{pmatrix} \equiv R_Z\left(\frac{\pi}{2}\right) \quad \text{with } \theta_g = \frac{\pi}{4}$$

$$R_{z_3} = \begin{pmatrix} 1 & 0 \\ 0 & e^{i\pi/4} \end{pmatrix} \equiv R_Z\left(\frac{\pi}{4}\right) \quad \text{with } \theta_g = \frac{\pi}{8}$$

Rotation gates in the QUI:

SWAP gate reverses order, so same as input

38

PHYS90045 Introduction to Quantum Computing

Three Qubit QFT - QUI

Example: $|011\rangle$

$$|011\rangle \rightarrow \left(\frac{1}{\sqrt{2}}\right)^3 \left(|000\rangle + e^{3\pi i/4}|001\rangle + e^{3\pi i/2}|010\rangle + e^{9\pi i/4}|011\rangle + e^{i\pi}|100\rangle + e^{7\pi i/4}|101\rangle + e^{5\pi i/2}|110\rangle + e^{13\pi i/4}|111\rangle \right)$$

NB. same as $\pi/4$ etc

39

PHYC90045 Introduction to Quantum Computing

Step back for a moment

After all that, let's check on what we were trying to achieve:

On a single basis state $\text{QFT} |a\rangle = \frac{1}{\sqrt{N}} \sum_{k=0}^{N-1} e^{\frac{2\pi i}{N} ka} |k\rangle$

e.g. $|011\rangle \rightarrow \left(\frac{1}{\sqrt{2}}\right)^3 \left(|000\rangle + e^{3\pi i/4} |001\rangle + e^{3\pi i/2} |010\rangle + e^{9\pi i/4} |011\rangle + e^{i\pi} |100\rangle + e^{7\pi i/4} |101\rangle + e^{5\pi i/2} |110\rangle + e^{13\pi i/4} |111\rangle\right)$

i.e. $3=101$ $|3\rangle \rightarrow \left(\frac{1}{\sqrt{2}}\right)^3 \left(|0\rangle + e^{3\pi i/4} |1\rangle + e^{3\pi i/2} |2\rangle + e^{9\pi i/4} |3\rangle + e^{i\pi} |4\rangle + e^{7\pi i/4} |5\rangle + e^{5\pi i/2} |6\rangle + e^{13\pi i/4} |7\rangle\right)$

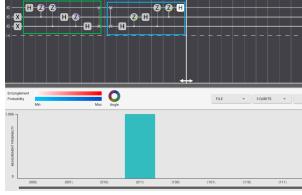

It obeys: $\text{QFT} |3\rangle = \frac{1}{\sqrt{8}} \sum_{k=0}^{N-1} e^{\frac{2\pi i}{8} 3k} |k\rangle$ (check it!)

40

PHYC90045 Introduction to Quantum Computing

Programming the Inverse QFT

As with any circuit: invert the QFT by inverting every gate and reversing the order:

$R_{zz} = \begin{pmatrix} 1 & 0 \\ 0 & e^{i\pi/2} \end{pmatrix} \equiv R_Z\left(\frac{\pi}{2}\right) \quad \text{with } \theta_g = \frac{\pi}{4}$

$R_{zg} = \begin{pmatrix} 1 & 0 \\ 0 & e^{i\pi/4} \end{pmatrix} \equiv R_Z\left(\frac{\pi}{4}\right) \quad \text{with } \theta_g = \frac{\pi}{8}$

$R_Z(\theta_R) = e^{i\theta_g} \left[I \cos \frac{\theta_R}{2} - iZ \sin \frac{\theta_R}{2} \right]$
 $= e^{i\theta_g} e^{-i\theta_R/2} \begin{pmatrix} 1 & 0 \\ 0 & e^{i\theta_R} \end{pmatrix}$

$R_Z^\dagger(\theta_R) = e^{-i\theta_g} e^{+i\theta_R/2} \begin{pmatrix} 1 & 0 \\ 0 & e^{-i\theta_R} \end{pmatrix}$

i.e. Reverse signs of θ_R and θ_g

e.g. $|011\rangle$

$|011\rangle \xrightarrow{\text{QFT}} \left(\frac{1}{\sqrt{2}}\right)^3 \left(|000\rangle + e^{3\pi i/4} |001\rangle + e^{3\pi i/2} |010\rangle + e^{9\pi i/4} |011\rangle + e^{i\pi} |100\rangle + e^{7\pi i/4} |101\rangle + e^{5\pi i/2} |110\rangle + e^{13\pi i/4} |111\rangle\right) \xrightarrow{\text{QFT}} |011\rangle$

PHYC90045 Introduction to Quantum Computing

Appendix: proof of the product form

In case you want to go through it at your leisure

$$\begin{aligned} |j\rangle &\rightarrow \frac{1}{\sqrt{N}} \sum_{k=0}^{N-1} e^{2\pi i j k / N} |k\rangle \\ &= \frac{1}{\sqrt{N}} \sum_{k_1=0}^1 \dots \sum_{k_n=0}^1 e^{2\pi i j \sum_l k_l 2^{-l}} |k_1 \dots k_n\rangle \\ &= \frac{1}{\sqrt{N}} \sum_{k_1=0}^1 \dots \sum_{k_n=0}^1 \otimes_l e^{2\pi i j k_l 2^{-l}} |k_l\rangle \\ &= \frac{1}{\sqrt{N}} \otimes_l \left[|0\rangle + e^{2\pi i j 2^{-l}} |1\rangle \right] \\ &= \frac{|0\rangle + e^{2\pi i 0 \cdot j_n} |1\rangle}{\sqrt{2}} \otimes \dots \otimes \frac{|0\rangle + e^{2\pi i 0 \cdot j_1 j_2 \dots j_n} |1\rangle}{\sqrt{2}} \end{aligned}$$

PHIC90045 Introduction to Quantum Computing

This Week

Lecture 11
Fourier Transformations, Regular Fourier Transform, Fourier Transform as a matrix, Quantum Fourier Transform, QUI examples, Inverse QFT

Lecture 12
Shor's Quantum Factoring algorithm, Shor's algorithm for factoring and discrete logarithm, HSP Problem

Lab 6
QFT and Shor's algorithm

43
